1. Implement Insertion Sort.
2. Write a program to print frequencies of all the characters in the input.
3. Given two sorted arrays of N elements each, find median of total 2N elements.
4. Given 2N+1 numbers out of which N are duplicate find the non-duplicate number.
5. Given two arrays return their intersection.
6. Given an array, reverse it without using a new array. You need to first reverse the array and then print it.
